

Spitfire offers portfolio of solutions at IP Expo

29 September 2017

Spitfire, the multi-award winning Internet telephony service provider and ISP, is exhibiting on stand G18 at IP Expo, on 4 - 5 October at ExCeL, London. This year Spitfire is participating in the IP Expo Seminar programme. Andy Duncan, Spitfire's IT Interface Manager, will discuss 'Practical Solutions for ensuring voice quality in The Cloud' in a session at 12.20pm on 4 October, followed on 5 October by a second seminar on 'Practical Solutions for Interconnecting Sites, Data Centres and Cloud Services' at 1.40pm. Further details can be found at: www.ipexpo europe.com/2017-Seminars

On the Spitfire stand visitors can see a demonstration of the 3CX telephony platform. 3CX has been added by Spitfire to its own cloud distribution platform. Spitfire can offer 3CX 'in the cloud' as a self-configured/self-managed solution or as a fully managed service to suit customers' individual capabilities and requirements.

Also demonstrated is Spitfire's own SIP Communicator™ hosted telephony service. SIP Communicator™ only requires SIP compatible handsets, making the service an extremely cost-effective solution for business start-ups and small businesses that are growing and anticipate moving premises or are spread over multiple sites. For larger enterprises SIP Communicator™ is the ideal solution for staff working remotely from home as they have full access to phone system functionality, just as if they were in the office. Larger businesses also benefit from the disaster recovery potential of SIP Communicator™.

Visitors to the Spitfire stand can discuss Spitfire's SIP Trunk service. Designed as an ISDN30e and ISDN2e replacement, Spitfire's SIP Trunks offer business quality secure telephony at typically up to 50 per cent less than the monthly rental cost of an equivalent ISDN service. As one of the only ISPs and fixed line operators to offer a SIP Trunk service, Spitfire offers a complete end-to-end SIP service via its own IP and TDM infrastructure.

For data connectivity Spitfire offers a range of Ethernet connectivity options providing customers with next-generation-network broadband access. This includes a new GEA

Ethernet option offering the same performance SLAs as EFM (Ethernet First Mile) and Fibre Leased lines, but at a cost effective price.

Potential reseller partners visiting the show can benefit from Spitfire's Partner Service offering outstanding technical support and assistance for IT companies wishing to offer their clients voice and data network services.

Susie Ward, HR & Marketing Director for Spitfire, commented, "Spitfire is an industry leader in IP engineering and SIP technology as our participation in the event's seminar programme demonstrates. Visitors to our stand will find a full portfolio of IP solutions for voice and data that can improve business efficiency and cut costs."

Ends.
