

## Re-configuring Apple Mail with the new Spitfire mail server

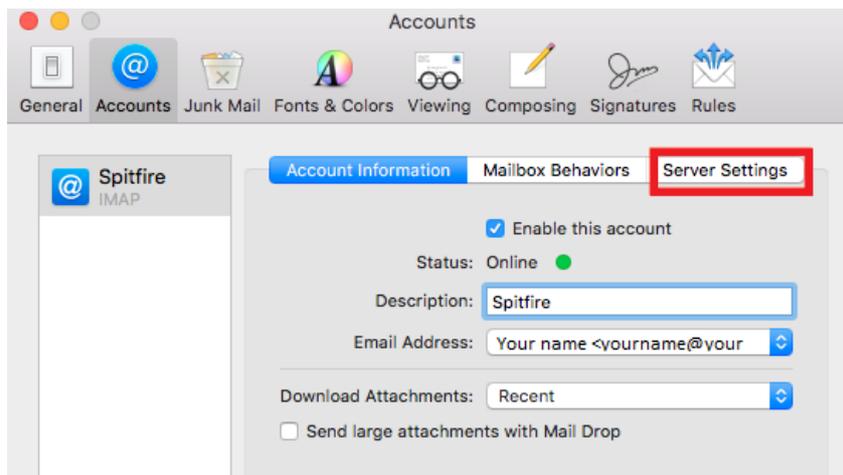

Open Mail application on your device

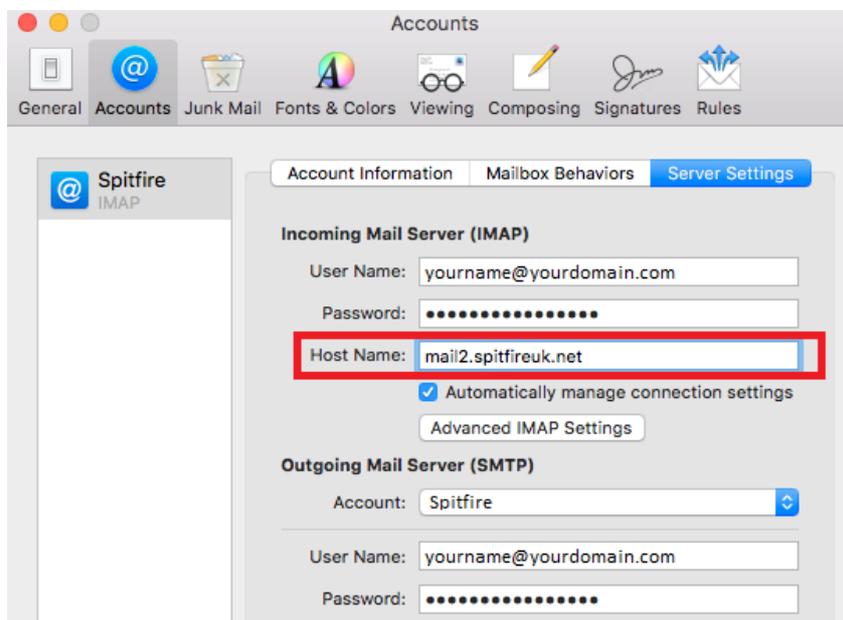

Select “Mail” and then “Preferences”

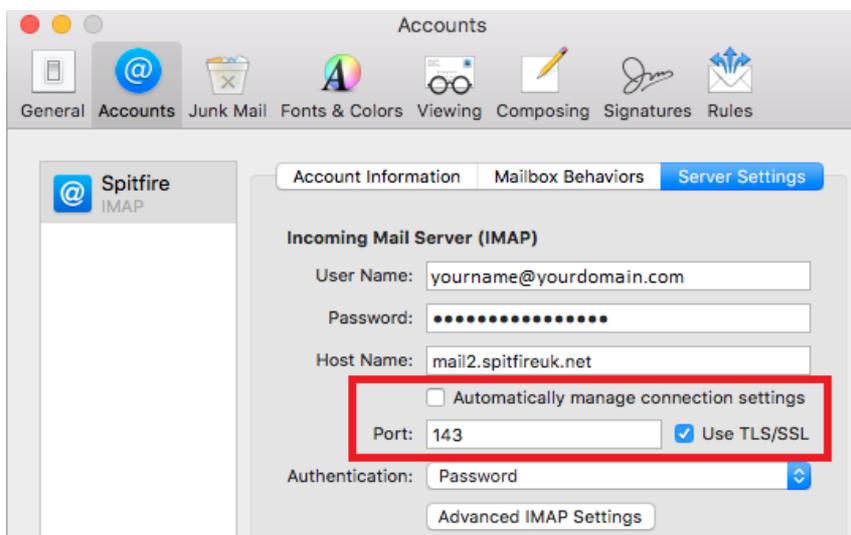

Select “Accounts”

Select **“Server Settings”**

Change the host name field under Incoming Mail Server to **“mail2.spitfireuk.net”**

Untick **“Automatically manage connection settings”** and tick **“Use TLS/SSL”**. The port should be set to **“143”**

**Note:** If you are keeping your account as POP3 (not recommended, use IMAP where possible) The port should be set to 110 or 995
