

Cyber Security

Cyber Security is becoming more important due to increased reliance on computer systems, the Internet and wireless network standards such as Bluetooth and Wi-Fi. Owing to the growth of “smart” devices, including smartphones, televisions, and the various devices that constitute the “Internet of things”, cyber security is one of the major challenges facing businesses today.

Spitfire’s IT security concentrates on the protection of computer systems and networks from the theft of or damage to their hardware, software, or electronic data, as well as from the disruption or misdirection of the services they provide.
