

SIMs for BMS

4G/5G Remote Access Solution for Building Management Systems

Remote Access Made Secure
and Simple for BMS
for less than

£1 per Month!

Key Benefits

Low Cost

Stop wasting money on unused data bundles, switch to Pay Per MB today and only pay for exactly what your SIM uses.

Remote Access

Options to remotely access your BMS software & web interfaces via low cost and secure VPN or secured Fixed Public IP.

Security

Enhanced security measures available giving peace of mind against hackers.

Optional Managed Router

Pre-configured and fully managed Teltonika routers supplied with all necessary port forwards required for remote access to your systems at no extra cost.

Easy Installation

No need to configure routers or VPNs any longer. Plug and play solution with SIM, router and VPN delivered ready to go.

Visibility

View information such as real-time data usage via an online portal.

Reliability

Have confidence with reliable Multi-Network connectivity.

Building Management Sector

Offering a low-cost, secure alternative to traditional fixed public IP address SIMs.

Stay connected. Stay secure. Stay in control.

Why use Spitfire for connectivity to your BMS?

Spitfire's BMS SIM solution is designed specifically for the building management sector - offering a low-cost, secure alternative to traditional fixed public IP address SIMs.

Why Spitfire?

Unsecured fixed public IP address SIMs are costly and exposed to online threats. Alternatives like 3rd-party VPNs add complexity and don't scale easily. Spitfire simplifies remote access with a MPLS based private network of private IP address SIMs and port forwarding, allowing multiple SIMs to sit behind a single secured fixed public IP, cutting costs and exposure.

What About Security?

We can lock down access with source IP restrictions or offer a free managed VPN - just one VPN covers all SIMs. For wider network security, we can provide a fully private network with direct cloud and office connectivity, giving you the option to keep your data off the public internet entirely.

Plug & Play Routers

Spitfire can pre-configure Teltonika routers to your system needs, whether using Trend, Tridium, or other platforms, for quick, easy and secure access to BMS software and web interfaces.
