

SIMs for Solar Panel Systems

4G/5G Connectivity Solution

Remote Access made simple and secure for less than

£1 per Month!

Or

Upfront payment data packages for installations up to 5 years

Key Benefits

Flexible pricing models

Opt for 'Pay Per MB' and only pay for exactly what your SIM uses, or tie your data bundle into 1, 2, 3, 4 or 5 years, with a range of data options included, with one upfront payment.

Security

A range of low cost security options to enable secure remote access and mitigate risk from malevolent third parties.

Pre-configured, managed router

Fully managed Teltonika routers supplied for remote access to your systems, pre-configured and sent to site at no extra cost.

Easy installation

No need to configure routers or VPNs any longer. Plug and play solution with SIM, router and VPN delivered ready to go.

Visibility

Manage your SIM estate, including near real-time data usage, via an online management portal.

Reliability

Have confidence with reliable dual IMSI multi-network connectivity, connecting you to all 4 major UK networks.

One Network and SUN

Our unique holistic approach to end to end IoT connectivity including mobile, fixed line and Cloud.

**Stay connected. Stay secure.
Stay in control. Stay on budget.**

Why use Spitfire connectivity for your Solar services?

Spitfire's SIMs for solar solutions are designed specifically for the renewables sector - offering a low-cost, flexible pricing models to give you more control and boost your profit margins.

Why Spitfire?

Spitfire's full MVNO capability gives solar providers unmatched flexibility. We design upfront data packages built specifically for installations up to 5 years. Because we manage connectivity end-to-end, our support is faster and more effective, plus we pre-configure routers at no extra cost, cutting your engineering time on site and simplifying deployment.

What About Security?

Using MPLS private networks, we can provide restricted access to your SIM estate - using access control lists and source IP address permissions or a free managed VPN - just one VPN covers all SIMs. For wider network security, we can provide a fully private network including direct cloud and fixed line office connectivity, giving you the option to keep your data off the public internet entirely. All endpoints become invisible and unreachable to external threats.

Turnkey Solution

Spitfire can pre-configure Teltonika routers and install the SIM prior to sending to site, giving you a turnkey solution for quick, easy and secure access to your solar solutions across the UK.

Low cost remote access

Fully managed router
